Important to Communicate Cancer Prevention Message to Young Adults to Reduce Risks Later in Life

In a Special Supplement to the American Journal of Preventive Medicine experts examine the challenges of effectively communicating with young adults regarding cancer prevention and explore possible solutions

Ann Arbor, MI, August 14, 2017 – The latest estimates suggest that, by 2020, more than 1.9 million Americans will be diagnosed with cancer each year. In a special supplement to the American Journal of Preventive Medicine, a noted group of experts examines the evidence linking factors in early adulthood (18 to 44 years of age) to subsequent cancer risk and presents opportunities for putting that evidence into public health practice in order to help individuals reduce cancer risk later in life.

The articles cover a variety of cancer types from breast to skin cancer, as well as health behaviors, chronic conditions, and inflammation that increase cancer risk. With a particular emphasis on younger adults, the unique risks of this age group and the possibilities for early interventions are examined. Opportunities to reduce cancer risk are considered within the framework of social drivers of health, including social and behavioral factors.

Guest Editors Claire D. Brindis, DrPH, Philip R. Lee Institute for Health Policy Studies and the Adolescent and Young Adult Health National Resource Center, University of California, San Francisco, San Francisco, California, Dawn M. Holman, MPH, and Mary C. White, ScD, both of the Division of Cancer Prevention and Control, Centers for Disease Control and Prevention, Atlanta, Georgia, have assembled a broad overview of the potential for expanded cancer prevention efforts targeted at young adults in the U.S.

Most cancers are thought to be caused by a combination of factors operating over a person’s lifetime. In the opening commentary, Dr. Brindis states, “A nuanced understanding of early adulthood and factors that place this age group at particular risk offers insights on how to avoid the cascade of longer-term negative health consequences as this population ages.”
Ms. Holman and co-authors present the highlights from a meeting of 15 interdisciplinary experts convened by the CDC and the National Association of Chronic Disease Directors that focused on cancer prevention in early adulthood. The evidence linking behaviors and health conditions common at this stage of life to subsequent cancer risk was considered, so that strategies to reduce cancer incidence can be more effectively tailored, targeted, or implemented. Many themes from the meeting are discussed in greater detail within the other articles. Holman and co-authors note that “collectively, these papers illustrate the challenges and opportunities that exist when tackling cancer prevention at this stage of life.”

Articles in this supplement by meeting participants, CDC staff, and collaborators underscore important health behaviors in early adulthood and patterns in chronic health conditions and propose tailored interventions that can be successful in mitigating risks. Specific topics include:

- Costs of treating breast cancer incidence attributable to alcohol consumption by young women, estimated at $150 million annually
- Identification of mental health problems that have traditionally not been part of the mix of factors that may directly and indirectly raise cancer vulnerability
- Investigation of why breastfeeding, which appears to reduce breast cancer rates, is less prevalent among black women and discussion of how interventions such as peer counseling, hospital policy changes, breastfeeding-specific clinic appointments, group prenatal education, and enhanced breastfeeding programs have been shown to be effective in communities of color
- Discussion of public health activities that could reduce lifetime cancer risks:
  - Alcohol screening and brief intervention, as recommended by the CDC, to identify and help young adults who drink in excess
  - Communication of cancer risks in settings common to young adults
  - Efforts to counter the targeted marketing of harmful products to young adults
  - Application of lessons learned through review of a health literacy program to both cancer and general medical education of the public
- Use of popular recreational spaces such as bars and nightclubs as promising settings for interventions to reduce risky behaviors such as smoking and binge drinking among young adults
- Potential of social media to reach a large audience with information, for example, the risk of developing skin cancer from using tanning beds

Several articles highlight disparities in cancer risk factors by race, ethnicity, social status, neighborhood location, and other subpopulation characteristics. Logic models can be used to guide research programs into these disparities to help achieve the ultimate goal of reducing cancer incidence. Further, an award-winning, youth-generated diabetes prevention program could be used as a model for cancer prevention, especially in minority communities at higher risk.

“The growing impact of cancer, both in the U.S. and globally, and the prevalence of modifiable cancer risk factors represent a window of opportunity to reduce cancer incidence at the population level,” commented Dr. Brindis. “A comprehensive approach to cancer prevention considers the multiple and complex causal factors operating at different points in the life course. This approach also requires focusing on specific risk factors and the social determinants of health that contribute to the development of cancer and other preventable diseases.”
Notes for Editors

Supplement: Opportunities for Cancer Prevention During Early Adulthood

Guest Editors:
Claire D. Brindis, DrPH
Philip R. Lee Institute for Health Policy Studies and the Adolescent and Young Adult Health National Resource Center, University of California, San Francisco, San Francisco, California

Dawn M. Holman, MPH
Division of Cancer Prevention and Control, Centers for Disease Control and Prevention, Atlanta, Georgia

Mary C. White, ScD
Division of Cancer Prevention and Control, Centers for Disease Control and Prevention, Atlanta, Georgia

Table of Contents
INTRODUCTION AND BACKGROUND
Setting the Stage: Advancing a Cancer Prevention Agenda for Young Adults
CD Brindis

Cancer Prevention During Early Adulthood: Highlights From a Meeting of Experts
DM Holman, MC White, ML Shoemaker, GM Massetti, MC Puckett, CD Brindis, on behalf of the Cancer Prevention During Early Adulthood Writing Group

CANCER RISK DURING EARLY ADULTHOOD
Prevalence of Modifiable Cancer Risk Factors Among U.S. Adults Aged 18 – 44 Years
MC White, ML Shoemaker, S Park, LJ Neff, SA Carlson, DR Brown, D Kanny

Young Adult Risk Factors for Cancer: Obesity, Inflammation, and Sociobehavioral Mechanisms
YC Yang, MP Johnson, KM Schorpp, CE Boen, KM Harris

Mental Health Problems and Cancer Risk Factors Among Young Adults
GM Massetti, CC Thomas, J King, K Ragan, N Buchanan Lunsford

Breastfeeding and Breast Cancer Risk Reduction: Implications for Black Mothers
EH Anstey, ML Shoemaker, CM Barrera, ME O'Neil, AB Verma, DM Holman

Estimation of Breast Cancer Incident Cases and Medical Care Costs Attributable to Alcohol Consumption Among Insured Women Aged < 45 Years in the U.S.
DU Ekwueme, BT Allaire, WJ Parish, CC Thomas, D Poehler, GP Guy Jr., AP Aldridge, SR Lahoti, TL Fairley, JG Trogdon

TAKING PUBLIC HEALTH ACTION TO PREVENT CANCER
Alcohol Screening and Brief Intervention: A Potential Role in Cancer Prevention for Young Adults
LR McKnight-Eily, SJ Henley, PP Green, EC Odom, DW Hungerford

Cancer Risk – Promoting Information: The Communication Environment of Young Adults
RF McCloud, RE Kohler, K Viswanath

Health Literacy: Cancer Prevention Strategies for Early Adults
RA Simmons, SC Cosgrove, MC Romney, JD Plumb, RO Brawer, ET Gonzalez, LG Fleisher, BS Moore

Bars, Nightclubs, and Cancer Prevention: New Approaches to Reduce Young Adult Cigarette Smoking
PM Ling, LM Holmes, JW Jordan, NE Lisha, K Bibbins-Domingo
Teens, Tweets, and Tanning Beds: Rethinking the Use of Social Media for Skin Cancer Prevention
AE Falzone, CD Brindis, MM Chren, A Junn, S Pagoto, M Wehner, E Linos

Origins of Cancer Disparities in Young Adults: Logic Models to Guide Research
RA Hiatt, MA Handley, PM Ling, E Burchard, N Thakur, K Bibbins-Domingo

Reducing Cancer and Cancer Disparities: Lessons From a Youth-Generated Diabetes Prevention Campaign
D Schillinger, PM Ling, S Fine, CB Boyer, E Rogers, RA Vargas, K Bibbins-Domingo, WS Chou

This supplement to the American Journal of Preventive Medicine, volume 53, issue 3 (September 2017), published by Elsevier, is openly available at http://www.ajpmonline.org/issue/S0749-3797(17)X0003-2. Please visit this site to view the table of contents and access full text of the contributions.

Full text of the articles is available to credentialed journalists prior to the embargo date; contact Julie Fielding at +1 734-615-6041 or ajpmm@elsevier.com. Journalists wishing to interview Guest Editors or individual authors who are affiliated with CDC should contact CDC Media Relations at +1 404-639-3286 or media@cdc.gov.

This Supplement of the American Journal of Preventive Medicine has been sponsored by the U.S. Centers for Disease Control and Prevention (CDC), an Agency of the U.S. Department of Health and Human Services, under contract number: 200-2017-M-94637. The ideas expressed in the articles are those of the authors and do not necessarily reflect the official position of CDC.

About the American Journal of Preventive Medicine
The American Journal of Preventive Medicine is the official journal of the American College of Preventive Medicine and the Association for Prevention Teaching and Research. It publishes articles in the areas of prevention research, teaching, practice and policy. Original research is published on interventions aimed at the prevention of chronic and acute disease and the promotion of individual and community health. The journal features papers that address the primary and secondary prevention of important clinical, behavioral and public health issues such as injury and violence, infectious disease, women's health, smoking, sedentary behaviors and physical activity, nutrition, diabetes, obesity, and alcohol and drug abuse. Papers also address educational initiatives aimed at improving the ability of health professionals to provide effective clinical prevention and public health services. The journal also publishes official policy statements from the two co-sponsoring organizations, health services research pertinent to prevention and public health, review articles, media reviews, and editorials.

About Elsevier
Elsevier is a global information analytics business that helps institutions and professionals progress science, advance healthcare and improve performance for the benefit of humanity. Elsevier provides digital solutions and tools in the areas of strategic research management, R&D performance, clinical decision support, and professional education; including ScienceDirect, Scopus, ClinicalKey and Sherpath. Elsevier publishes over 2,500 digitized journals, including The Lancet and Cell, more than 35,000 e-book titles and many iconic reference works, including Gray's Anatomy. Elsevier is part of RELX Group, a global provider of information and analytics for professionals and business customers across industries. www.elsevier.com
