
The editorial office has been notified of the following errors.

In Table 2, the entries beneath column 2 heading "Estimated Workers (1000s)" and column 8 heading "Workers (1000s)" were in error because the data presented is presented in the 100s. The data in those two columns should have been presented in the 1000s and rounded up or down as appropriate. For example, in column 2, row 1, the entry 23,757 should have read 2,376.

The above change in Table 2 does not affect the rest of the paper, including the results, discussion or conclusions.

The editorial office has been notified of the following errors.

As published, the word “not” is missing from the final sentence of the Results section of the abstract. It should have read, “Discrimination and psychological distress were not associated with venous thromboembolism.” The data and text are correct in the main article.

The editorial office has been notified of the following errors.

In the originally published article, Figure 1 was presented such that the text of the key to the bar graph was cut off. It showed, for example, “GLB—Healthy” instead of “GLB—Healthy Overall.”

In addition, the numbering and positioning of Table 1 and Table 2 (but not the citations of each table) were reversed. In the corrected version, Table 1 is titled “Baseline Demographic and Clinical Characteristics by Study” and Table 2 is titled “A 6-Month Change Within Randomized Groups Overall and for Participants Initially At Risk for Each Risk Factor.” The publisher apologizes for any inconvenience caused by these errors. The article has since been corrected online.

The editorial office has been notified of the following errors.

The scale of the right-hand axis and of “Total Injuries” and “Drone Injuries” in the symbol key of Figure 1 should be “per 10 million People” (not “per 100,000 People”), as should the denominator for the population-based injury rates.
reported in the first paragraph of the Results section. The injury counts and weighted national estimates, the statistical associations between injuries and patient characteristics, and the implications of the observed longitudinal increase in drone injuries relative to total hobbyist aircraft injuries are unaffected by this error. The authors apologize for any confusion this has caused.

The editorial office has been notified of the following errors.

The name of author Emily M. D’Agostino was mistakenly placed twice in the author byline in the originally published version. The placement as third author was incorrect, and the placement as last author was the correct placement. The error has since been corrected online. The publisher apologizes for any confusion this has caused.
